# Governance

**Governance** - regimes of laws, rules, judicial decisions, and administrative practices that constrain, prescribe, and enable the provision of publicly supported goods and services (Lynn et al. 2001, p.7)

**Governance** - the process of steering society and the economy through collective action and in accordance with common goals (Torfing et al. 2012, p.14)

- Traditional public sector provision increasing seen as inadequate
- New Public Management and New Public Governance
- Proliferation of innovative forms of public governance, e.g. networks, partnerships and collaborative arrangements (Klijn 2008)
- Focus on exchange of resources, negotiations, and trust (Ostrom and Walker 2003).
- Undermined democratic quality due to the influence of non-public actors, which could create power asymmetries (Papadopolulos 2003).

# Accountability

- “A chameleon-like concept” - various meanings to different people (Sinclair 1995)
- A principal-agent relationship between the agent and the principal who can hold the agent to account for its behaviour and activity (Mayston 1993).
- Multiple, different, changing, and often conflicting expectations within and outside public sector organisations (Willems and Van Dooren 2011, Denhardt and Denhardt 2011).
- “Accountability paradox’ rather than a healthy balance between performance and other functions of accountability (Jos and Tompkins 2004).
- Increased accountability can result in a counterproductive effect of accountability “overloads” on service’s performance (Halachmi 2014)

# The impact of governance on accountability

A better-governed world = more governance and more accountability (Pollitt and Hupe 2011).

Organisations largely enact their accountability through governance structures (March and Olsen 1983).

- Traditional hierarchical governance models provide clear lines of accountability
- In new innovative forms of governance accountability arises from the interplay of many actors, some of whom are not in hierarchical relationships.

It becomes increasingly challenging to establish who is accountable to whom and for what because decision-making is shared among multiple actors (Bevir 2009).

# Research context

Under-researched governance in emergency services due to emergency studies focusing mainly on management and organisation rather than governance (Farrell 2018)

Significant variations in emergency services governance, hence difficulties of international comparison (Wankhade et al. 2019)

Lack of systematic analysis of fire governance models despite the development of alternative models in England

# Policy context

- Traditional long-standing governance model of the local fire and rescue authority (a membership drawn from local govt)
- *“A fire and rescue landscape still beset by poor governance and structures... A service that requires further reform to improve accountability, bring independent scrutiny and drive transparency.”* (Mrs May 2016)
- Since 2017, UK government has introduced an alternative governance model to improve accountability in practice
  - Police and Crime Commissioners (PCCs) have been able to make a case to assume responsibility for the governance of fire and rescue services within their force areas and become Police, Fire and Crime Commissioners (PFCCs)
- Directly elected individuals have not been a feature of the UK’s local governance arrangements
- To date, 4 local fire services adopted the PFCC model (out of 45 English fire services)

# Research Question

Academic debates: The relationship between governance and accountability remains relatively vague. Lack of systematic analysis of fire governance models despite the development of alternative innovative models in England

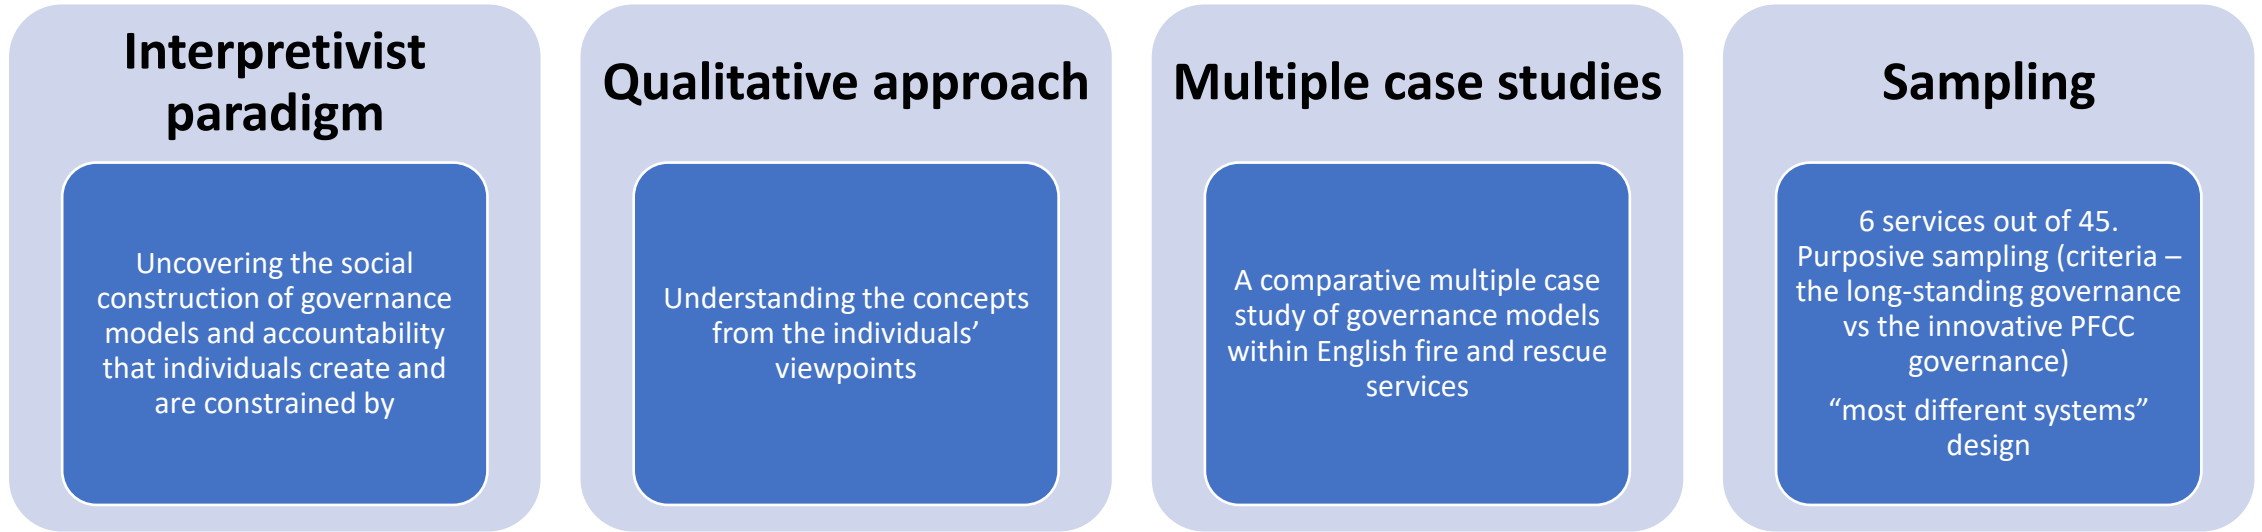

Political debates: The fire rescue landscape is characterised by poor governance and accountability structures that need to be improved. The Conservative Party in favour of the new PFCC governance model.

**RQ: How do English Fire and Rescue Services understand the notions of accountability and their implementation in the context of the traditional governance arrangements and the new PFCC arrangements introduced by the Policing and Crime Act 2017?**

# Research Design

The long-standing FRA model	The innovative PFCC model
Case 1 (combined FRA) - pilot	Case 2 (former county FRA)
Case 5 (metropolitan FRA)	Case 3 (former combined FRA)
Case 6 (county FRA)	Case 4 (former combined FRA)

County, combined and metropolitan authorities types of local government institutions (outside of London)

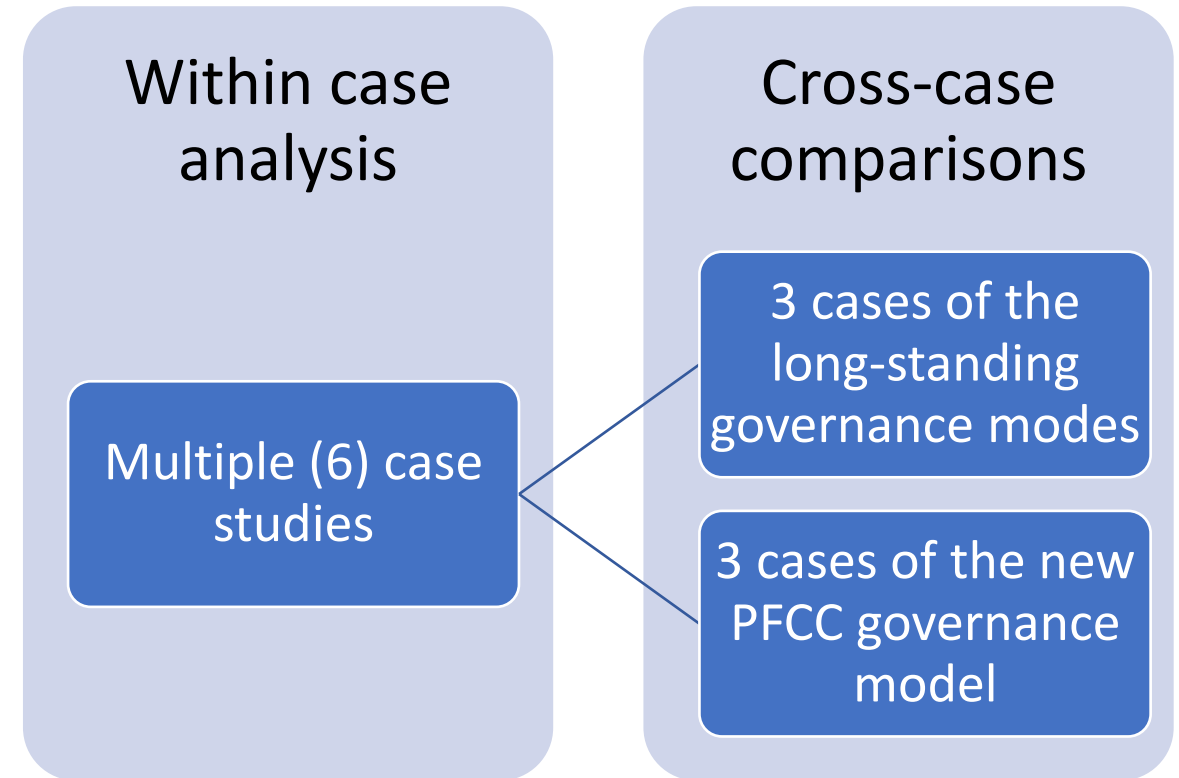

# Data Collection and Analysis

## Data collection

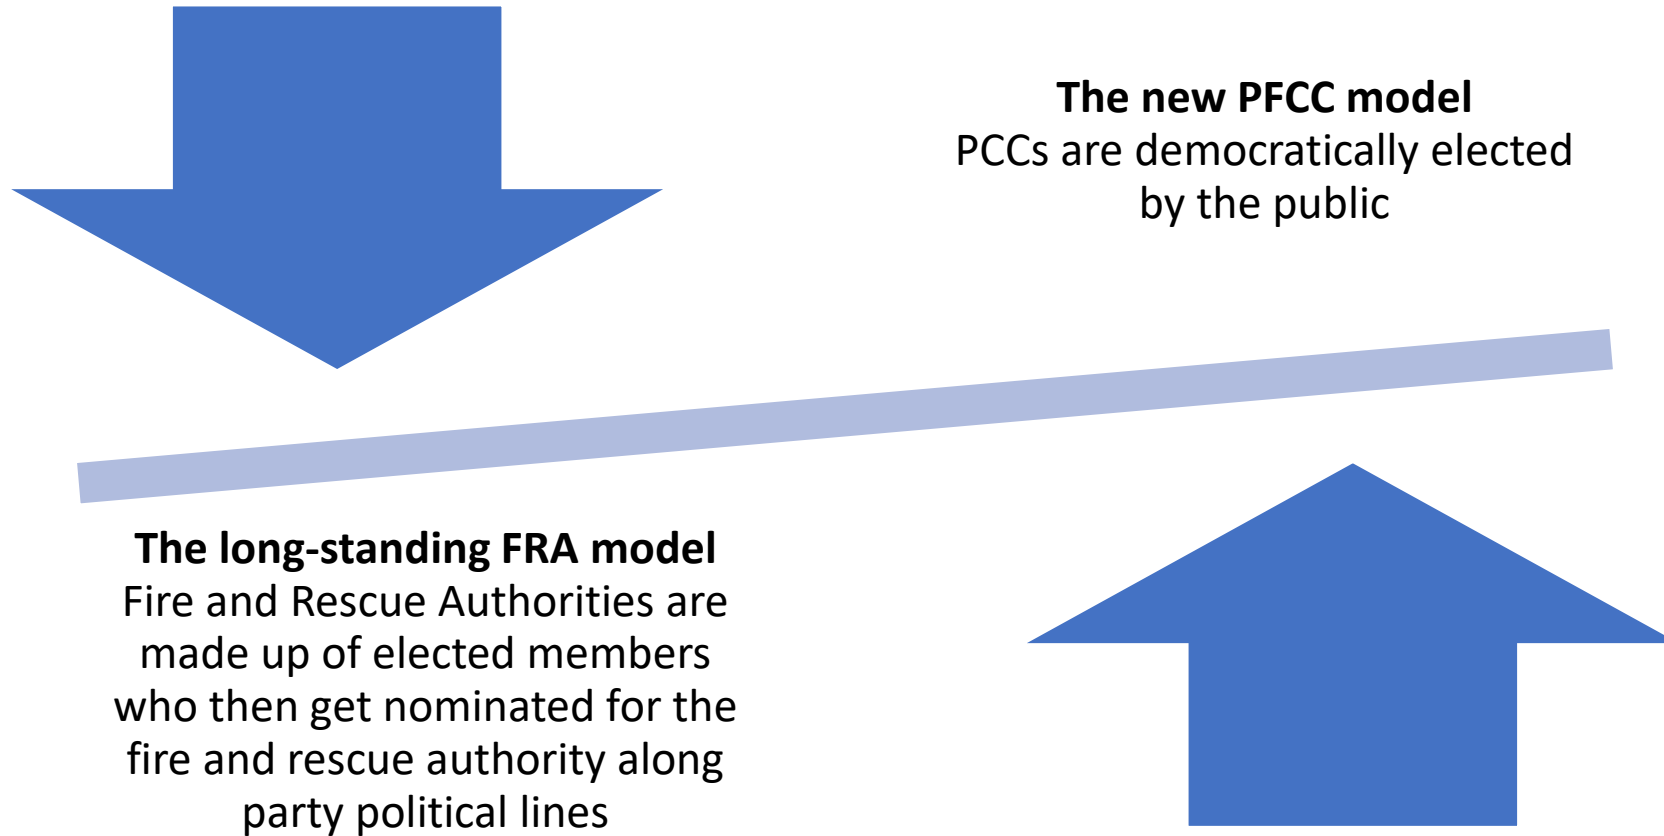

- 36 semi-structured interviews with senior management (min 5 per each case study),
- 5 focus groups with firefighters,
- Publicly available documents

## Data analysis

- Thematic coding (NVivo)
- Abductive approach - a constant interplay between the data and the coding process to refine the themes and their subthemes.

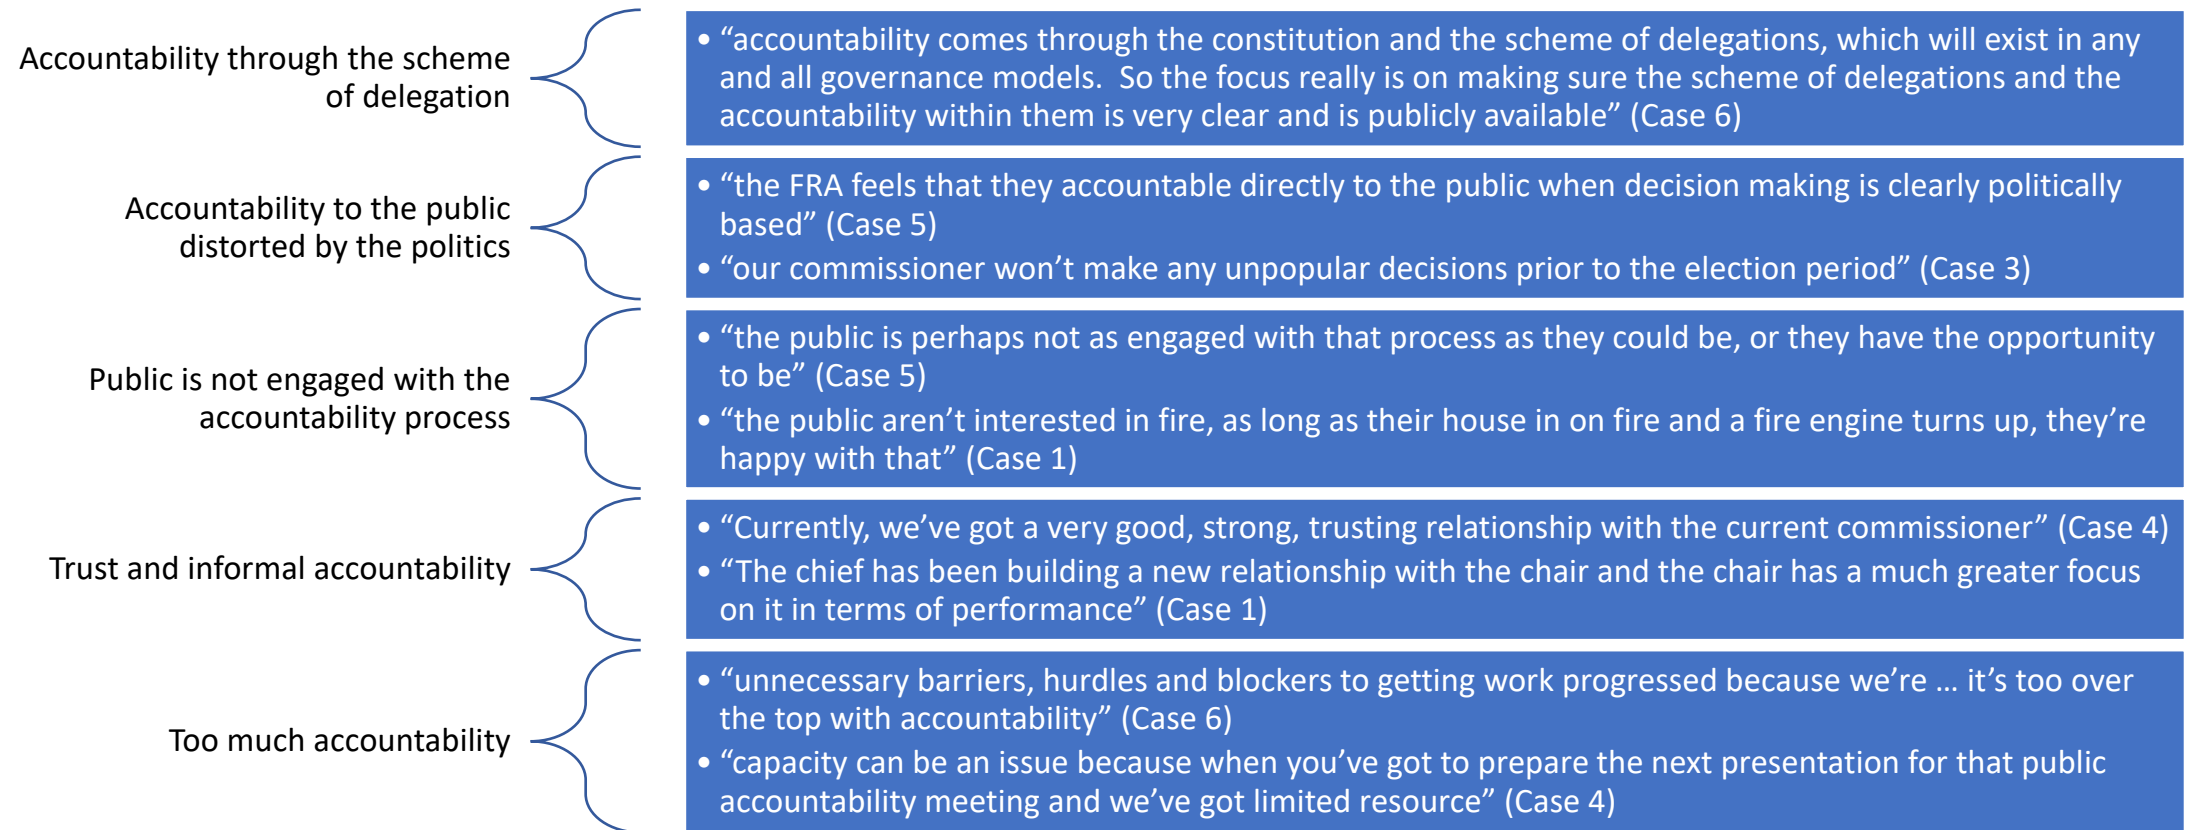

# Contrasting models of local fire governance

# Findings – emerging themes (contrasting perceptions)

# Findings – emerging themes (common perceptions)

# Provisional conclusions

- The innovative governance and accountability arrangements for FRS in England are more complex than the traditional arrangements.
- The expanded powers of PFCCs are reflected in new accountability mechanisms for the fire sector, however, the data reveals that does not necessarily improve accountability (Jos and Tompkins 2004).
- Excessive requirements – unnecessary barriers to accountability. Accountability overloads (Halachmi 2014)
- Both governance models are heavily influenced by the local political structures and discourse (adversarial or consensual)
- Next step is to understand the full implications of the 2017 Act (the impact of the new external inspectorate for FRS, the introduction of a duty to collaborate with other emergency services etc.) on governance and accountability arrangements.
